

Ferdaws Qaem

Computer Engineering Student · Software Engineering Intern Candidate

ferdawsqaem@gmail.com · Istanbul, Türkiye · github.com/Ferdaws-c · linkedin.com/in/ferdaws-qaem

PROFESSIONAL SUMMARY

4th-year Computer Engineering student at Istanbul Kültür University with project experience in mobile development (Flutter/Dart), embedded systems (IoT), and object-oriented programming in Python, C, and C++. Completed an Erasmus+ exchange semester at VSB–Technical University of Ostrava (Faculty of Electrical Engineering and Computer Science). Looking for a software engineering internship where I can apply classroom knowledge to real engineering problems and keep improving.

TECHNICAL SKILLS

Languages

Python · C · C++ · Dart · GDScript

Mobile / UI

Flutter · Cross-platform app development · Dart UI

Paradigms

OOP · Data Structures & Algorithms · Event-driven design

Embedded / IoT

Sensor integration · Alert systems · Hardware-software interfacing

Tools & Env.

Git · GitHub · VS Code

ML / Data

Machine Learning fundamentals

Soft Skills

English (professional) · Turkish (Intermediate) · Persian (native)

PROJECTS

Campus Lost & Found – Mobile Application | Flutter · Dart

- Designed and built a cross-platform Flutter mobile app enabling students to report lost items and browse found-item listings with search and filter functionality.
- Implemented a structured data model to track item state (lost → found → claimed), giving me practical experience with data modelling and state management.
- Focused on intuitive UX flow and component reusability, applying OOP principles and Flutter widget composition patterns.

HPC Temperature Alert System | IoT · Embedded C · Sensor Integration

- Designed and implemented an embedded IoT monitoring system for high-performance computing environments that continuously reads thermal sensors and triggers configurable alerts on threshold breach.
- Implemented threshold-based alert logic that triggers notifications when sensor readings exceed defined limits, focusing on reliability and low-latency response.
- Explored hardware-software interfacing and real-time sensor polling as part of the embedded systems coursework underpinning the project.

Risk Management Interactive Game | GdScript · Gamification · PMBOK

- Developed an interactive educational game translating PMBOK risk management concepts (risk identification, analysis, response planning, monitoring) into structured game mechanics.
- Designed branching decision logic and a scoring system to simulate real project risk scenarios, demonstrating software design and game-loop architecture skills.
- Went through a full build cycle—requirements, design, implementation, and iterative testing—which gave me a clearer picture of how software projects actually move.

Algorithms & Data Structures Practice Suite | C · C++ · Python

- Implemented 20+ algorithmic problems and data structure exercises (linked lists, trees, sorting, and recursion) as part of coursework and independent study.
- Strengthened problem-solving skills in C/C++ with focus on memory management, pointer arithmetic, and time complexity analysis.

EDUCATION

Istanbul Kültür University — B.Sc. Computer Engineering

Istanbul, Türkiye

4th Year (Senior) · Expected Graduation 2027

VSB – Technical University of Ostrava (Erasmus+ Exchange)

Ostrava, Czech Republic · Sep 2025 – Jan 2026

Faculty of Electrical Engineering and Computer Science

RELEVANT COURSEWORK

Data Structures & Algorithms · Object-Oriented Programming · Mobile Programming · Embedded Systems & IoT · Machine Learning · Project Management (PMBOK) · Computer Networks · Operating Systems

ADDITIONAL

Languages: Persian (Native) · English (Professional Working Proficiency) · Turkish (Professional Working Proficiency)

International Experience: Erasmus+ exchange — evidence of adaptability, cross-cultural collaboration, and academic initiative.
